

PowerSafe Technology Corp. to be Spotlighted in QualityStocks Daily

Valley Stream, NY – May 19, 2008 — [PowerSafe Technology Corp. \(PWSF.OB\)](#) announced today that they have agreed with QualityStocks to be featured in The Small Cap QualityStocks Daily Newsletter, Daily Internet broadcast and QualityStocks Daily Blogs and Message Boards.

In April '08 PowerSafe Technologies entered into a merger agreement with Amplification Technologies, Inc. Amplification's scientists have invented, patented and developed an extremely sensitive photodetector technology that brings the benefits of solid state technology to one of the last strongholds of vacuum tubes: low level light detection, and that is expected to provide important commercial advances in imaging, biomedical, lab, security and communications applications. This platform semiconductor technology allows amplification of weak signals with very low noise, has been patented to encompass detection of signals other than light, and thus could in principle also be used to create biological, radiological, electrical, and chemical sensors. It has the potential to transform a number of industries from medical diagnostics and drug development to telecommunications and security.

“PowerSafe Technology is very pleased to be featured in the QualityStocks Newsletter, Video and Blogs, and to avail itself of the service in the micro-cap markets that QualityStocks is providing us” said Jack Mayer, President of PowerSafe Technology.

Michael McCarthy, Managing Director for QualityStocks.net, commented, “We are very pleased to have PowerSafe Technology as a featured company. The Company's innovative technology appears to have great commercial promise.”

About [PowerSafe Technology Corp. \(PWSF.OB\)](#)

PowerSafe Technology is focused on completing its merger with Amplification Technologies and developing Amplification's extremely sensitive patented photodetector technology. The technology has significant performance and cost advantages over traditional technology and is positioned as the next generation solid state technology for low level light detection.
